

Fan-forced Portable Deoderiser

Australian designed and manufactured

Safe Guard Your Health

This fan-forced unit is designed to kill bacteria, viruses, mould and eliminate odours. The fan blows air past an internal ultra violet lamp destroying bacteria and viruses. The ultra violet lamp produces "O3" (ozone) which also destroys unpleasant odours. The length of time to destroy odours in an average size room is dependent on the strength of the odour. This unit does not use sprays that only mask the odour. This fan-forced unit is portable and plugs into a standard powerpoint. Maintenance will only require replacement of the ultra violet lamp.

The fan-forced deodoriser is particularly suitable for:

- home and office
- hotel and motel rooms
- caravan parks and cabins
- hospitals and doctors surgeries
- aged care facilities
- toilets
- veterinary surgeries
- kennels and catteries

Specifications

Dimensions	500mm (l) x 120mm (w) x 150mm (h)
Weight	3.0kg
Enclosure	Stainless Steel or Gold Finish
Voltage	240 volts - 50 Hz
Replacement Lamp	Mark 5 Lamp

Supplied by:

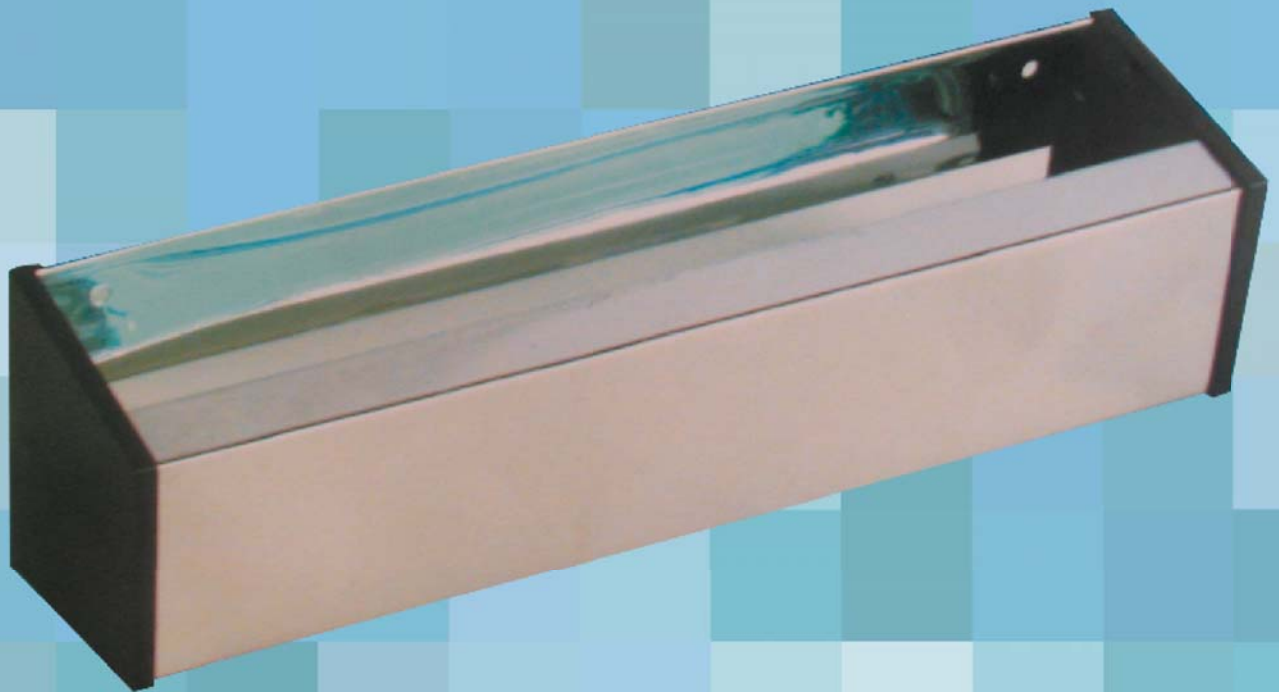

Cmore Lighting

NEW-AIR Portable Deodoriser

Australian made to Australian standards

Couldn't you use a little NEW-AIR in your life?

AUVS NEW-AIR units have a special ultra violet lamp that produces O3 in much the same way as in the upper atmosphere. O3 is a precious resource, not only as nature's germicide but also as a shield protecting the earth. Ultra violet light destroys bacteria, mould and viruses which do not build up an immunity to ultra violet as they do to chemicals and sprays.

The AUVS NEW-AIR unit comes in a range of units suitable for commercial or home use and covers an average size room for adequate protection.

No on going maintenance, no sprays or chemicals. Just plug into a 240volt powerpoint and let it do the work!

NO MORE TOBACCO SMELLS!

- produces clean fresh air
- effective against cigarette smoke
- doesn't just cover up smells
- destroys bad odours
- kills airborne bacteria
- energy efficient
- highly suitable for toilets
